组装最大可靠性设备

题目描述: 一个设备由N种类型元器件组成(每种类型元器件只需要一个,类型type编号从0~N-1),每个元器件均有可靠性属性reliability,可靠性越高的器件其价格 price越贵。 而设备的可靠性由组成设备的所有器件中可靠性最低的器件决定。 给定预算S,购买N种元器件(每种类型元器件都需要购买一个),在不超过预算的情况下,请给出能够组成的设备的最大可靠性。

输入描述: S N // S总的预算,N元器件的种类 total // 元器件的函数,每种型号的元器件可以有多种;此后有total行具体器件的数据 type reliability price // type 整数类型,代表元器件的类型编号从0~N-1;reliability 整数类型,代表元器件的可靠性;price 整数类型,代表元器件的价格 输出描述:符合预算的设备的最大可靠性,如果预算无法买齐N种器件,则返回 -1 补充说明: 0 <= S,price <= 10000000; 0 <= N <= 100; 0 <= total <= 100000; 0 < reliability <= 100000; 0 < reliability <= 100000;

```
示例1
输入:5003
6
080100
090200
15050
170210
250100
260150
输出:60
说明:预算500,设备需要3种元件组成,方案类型0的第一个(可靠性80),类型1的第二个(可靠性70),类型2的第二个(可靠性60)可以使设备的可靠性最大60
示例2
输入:1001
1 090200
输出:-1
说明:组成设备需要1个元件,但是元件价格大于预算,因此无法组成设备,返回-1
